Saint Mary's East Update on COVID-19 Status
Potentially Exposed Residents and Staff Test Negative

May 29, 2020 – Erie, PA – On May 22nd, Saint Mary's East learned of an employee who tested positive for COVID-19. Testing was performed on a total of 36 individuals, determined through internal contact tracing, who were potentially exposed to the employee. All testing was completed by May 23rd. All 36 of those test results were confirmed negative as of May 27th. The employee continues to be the only positive individual at the East campus associated with this event. That person remains quarantined at home and will need to meet certain requirements before returning to work.

There are currently no known cases of COVID-19 among residents or staff at Saint Mary's at Asbury Ridge.

The negative test results are a testament to the strict infection prevention and control policies within our buildings and are an encouraging sign that these policies are working. We continue to provide regular updates about our response to COVID-19 and the status of our communities on our website at stmaryshome.org/contact-us/news/.
